

R.S.M. = Radically Simple Mono

If you need more power to drive medium efficiency loudspeakers, without giving up the radical fidelity of Swissonor tube amps, this item is for you. The monophonic design using a huge toroidal transformers enhances an ultra sober design, composed of a single chip OPA, without any intermediate stage.

It has not only the same dimensions as our Mini-series, but completes perfectly the Swissonor P passive preamplifier.

The rugged construction on a cast iron mainframe with decoupling elements translates the Swissonor philosophy into the universe of solid state technology:

- Extremely compact design
- Design eliminates impedance and gain mismatch and reduces the number of active circuits.
- Separate ground wiring together with central ground connection and ground lift for best signal purity and low hum and noise.
- Oversized toroidal transformer resin sealed in black anodized aluminium housing
- Single 3886 OPA power amplifier
- High quality components all around, very long life low inductance capacitors, and double layer gold plated cardboards.

Specifications:

Integrated amplifier:

- Output power50 Watt/channel into 8 Ω
.....60 Watt/channel into 4 Ω
- Input impedance330 k Ω
- Input sensitivity.....800 mV
- Power bandwidth.....5 Hz to 50 kHz +/- 2 dB
- Dimensions L x l x h160 x 125 x 140 mm
